Objective

Electronics and Communication Engineering (ECE) student with a strong foundation in embedded systems, IOT, and software development. Passionate about designing and developing innovative electronic and AI-driven solutions. Skilled in programming, circuit design, and problem-solving.

Education

- Ballari Institute of Technology and Management** 2022-2026
Bachelors of Engineering (ECE)
8.33
- BPSC pu college** 2022
Pre University
76.6%
- Shanthinikethan English Medium High School** 2020
High school
68.8%

Skills

- Python
- C
- DSA

Projects

- Electronic voting machine using finger print sensor**
Developed a secure and user-friendly electronic voting machine integrated with a fingerprint sensor to ensure voter authentication and prevent duplication. The system verifies a voter's identity through biometric fingerprint recognition before allowing them to cast a vote. Designed using microcontrollerbased hardware , the project ensures data integrity, privacy, and reliable vote counting.
Technologies Used: Fingerprint Sensor, Arduino/8051 Microcontroller, LCD Display, Keypad, Embedded C, Proteus for simulation.
- IoT based health monitoring of paralysis patient using Arduino and Wi Fi module**
Designed and implemented a real-time health monitoring system for paralysis patients using Arduino, sensors, and GSM module. The system continuously tracks vital parameters like heart rate and body temperature, and sends automatic SMS alerts to caregivers or doctors during emergencies. Enhanced patient safety through IoT integration and wireless communication.

Languages

- English
- Kannada
- Telugu
- Hindi

Certification

- Python programming
- Agentforce Specialist

Internship

- Python Internship
- EZTS

Declaration

- I, B Chethan here by declare that the above furnished information is true to the best of my knowledge.
